To design a project we have 2 phases:

1 - analysis phase

- **Stakeholders analysis:** recognize all the actors involved and assign them specific roles and duties.
- **Problem analysis:** examine the issue in depth, clarify what the core problem is, and highlight possible difficulties and threats.
- **Objective analysis:** state the project's aims in a precise and understandable way.
- **Strategy analysis:** identify the target groups and outline the tangible outcomes expected.

2 - planning phase

- **Developing logical framework matrix:** design the structure of the project, verify coherence, and anticipate possible risks.
- **Activity scheduling:** plan the tasks needed to tackle the problem, fix clear deadlines, and organize follow-up meetings to monitor advancement.
- **Resource scheduling:** list the necessary inputs (people, organizations, materials) to carry out the project.
- **Financing plan:** map out all possible sources of funding and align them with the overall budget.
