Stakeholders mapping and analysis concerning SWM In Bissau: TEAM 1

Stakeholders are potential partners or adversaries of the project

	Designation	How are they affected by the problem?	What is their capacity to bring about change? (in keywords)
1. **Final beneficiaries**	Local communities living near toxic waste sites (exposed to pollution). Children women and old people. Students(healthier learning environment, safer schools). Farmers and fishers (protected soil, water, and ecosystems sustaining their livelihoods). Local health patients (reduction in pollution-related diseases). Future generations (cleaner environment, sustainable development).	• Communities near waste sites: suffer from polluted air, water, and soil leading to unsafe living conditions. • Children and students: face health risks and disrupted education in unsafe environments. • Farmers and fishers: lose productivity due to soil degradation, contaminated crops, and polluted waters. • Patients and local populations: higher rates of respiratory diseases, cancers, and other pollution-related illnesses. • Future generations: risk inheriting long-term	Community mobilization (collective action, local pressure) Local knowledge (traditional practices, awareness of risks) Advocacy voice (demanding accountability, influencing leaders)

		environmental damage and reduced development opportunities.	
2. Potential local target groups/ project partners: - **NGO's, associations**	**Environment:**BioGuinea Foundation,ODZH (Organização para o Desenvolvimento das Zonas Húmidas),Tiniguena **Health :**ADPP-GB (Ajuda de Desenvolvimento de Povo para Povo – Guinée-Bissau),Caritas Guinea-Bissau, Bandim Health Project	● Their mission to protect ecosystems is undermined by toxic waste pollution. ● Env NGO's face greater challenges in advocating for sustainability and biodiversity conservation. ● They face increased pressure and workload to respond to pollution issues alongside existing climate and deforestation challenges. ● More cases of preventable diseases linked to toxic waste. ● •Need to increase medical resources in affected areas.	Advocacy & lobbying power (influence policies, raise awareness) Technical expertise (biodiversity, sustainable waste management) Community mobilization (grassroots engagement, local action) Medical response capacity (treatment, prevention, emergency care) Public health awareness (education on toxic exposure, disease prevention)
- **professional Unions**	UNTG (União Nacional dos Trabalhadores de Guiné-Bissau / National Union of Workers of Guinea-Bissau), SINQUASS, Sindicato Nacional dos Professores (SINAPROF	Workers risk exposure to toxic substances in collection, transport, or industrial handling. Health professionals face increased caseloads from pollution-related diseases.	Collective bargaining (negotiate safer working conditions). Advocacy & lobbying (pressure government for stronger regulations). Worker mobilization (strikes, campaigns, awareness).

		Teachers see disrupted learning environments if schools are near polluted areas.	
- **community leaders**	*Régulos*, community elders in rural areas(traditional chiefs) Chefes de bairo (Neighborhood leaders), Women's group leaders leaders of market women's associations, cooperatives, solidarity groups).	Their communities suffer directly from toxic exposure (health risks, polluted water, unsafe living conditions). They face loss of trust from their people if they cannot help mitigate the crisis.	Local legitimacy (trusted by the community, can mobilize quickly). Mediation role (link between population and institutions). Social mobilization (organizing clean-up campaigns, awareness events).
- **religious leaders**	José Lampra Cà (bishop of Bissau), José Câmnate na Bissign (bishop emeritus of Bissau), Suleimane Embaló (president of the National Union of Imams of Guinea-Bissau), Mussá Kebe (leader of the Association of Koranic Parents and Teachers) protestant/evangelical leaders Traditional religions leaders	Mosques and churches often surrounded by uncollected trash (health problems for worshippers), affect their public image and credibility	Have to organise or pay for cleaning, speak out about keeping neighbourhoods clean
- **local authorities**	City of Bissau, Bissau Autonomous Sector	Ineffective waste collection leads to clogged drains, urban flooding, public health risks, and accumulation of waste in residential neighborhoods. Limited resources, capacity, and technical expertise make it difficult to meet local sanitation needs.	Local planning and coordination of waste collection services Implementation of municipal sanitation projects Mobilization of local resources and workforce

			Engagement with communities for awareness and participation Partnership with national authorities, NGOs, and private service providers Enforcement of local sanitation regulations and standards
- **National Authorities and Agencies**	NSIA foundation (for children's education in Guinea Bissau)	Poor solid waste management leads to public health crises, environmental degradation, and urban flooding, which directly impacts citizens and governance outcomes. Weak municipal and national infrastructure hinders service delivery and increases political and social pressure. Failure to manage waste effectively reduces public trust and signals weak governance to international partners and investors.	Regulatory authority and law enforcement Budget allocation and public funding for waste management Coordination of local and national initiatives Oversight of public-private partnerships and donor-funded projects Policy development, urban planning, and service standardization
- **private sector**	**Zero Lixo, Sousa Group / PMAR Guiné-Bissau** (logistics and maritime group), Banks,	Poor waste management increases operational challenges, reduces efficiency, and can damage company reputation.	Provide waste management, recycling, and sanitation services Develop innovative technologies and sustainable solutions

		Environmental degradation and public health risks negatively impact their local markets and workforce. Lack of infrastructure and regulatory support limits business opportunities in waste collection, recycling, and circular economy solutions.	Participate in public-private partnerships for urban waste infrastructure Raise public awareness and community engagement Mobilize financial and technical resources for project implementation Influence local market practices and promote environmental responsibility
- **etc…**			
Concerned European civil society (= potential lead or co-applicant	European environmental and development NGOs, also the citizen associations, ecological movements (for example environmental advocacy groups, European NGOs working on waste management, public health, or climate issues).	In Bissau, they are directly impacted by worsening environmental conditions, public health risks and pollution. Their mission of promoting sustainable urban development, sanitation, and climate resilience is challenged.	☐ Technical expertise in waste management, sanitation, and environmental protection ☐ The advocacy and public awareness campaigns ☐ Pilot project funding and implementation ☐ Citizen and community mobilization

			☐ Access to European networks and transnational partnerships
Concerned Bilateral and multilateral cooperation	Bilateral development agencies and multilateral cooperation programs (e.g., AFD – French Development Agency, GIZ – German Cooperation, EU development programs, ECOWAS technical support programs).	Poor waste management undermines stability, public health, and local development, which affects the success of their programs. Limits the impact of their investments in infrastructure, sanitation, and governance reforms.	• Financial support and grants for projects with technical assistance and training • Policy advice and regulatory support • Technology transfer and infrastructure development • Coordination with local and international stakeholders
Concerned International Organizations: UN agencies, foundations, funds and programs	UN agencies and programs (e.g., UNDP, UNEP, UNICEF, WFP, WHO), international foundations and programs like UN ENvironment Programme, environmental and development funds (e.g., Global Environment Facility, Green Climate Fund).	Increased health, environmental, and economic vulnerabilities in Bissau challenge their mandate to improve well-being and achieve SDGs. Poor waste management undermines projects on sanitation, public health, climate resilience, and urban development. Data gaps and weak local governance make it harder to plan, monitor, and demonstrate impact.	• Technical expertise in waste management, sanitation, health, and environmental protection. • Funding and resource mobilization for projects and pilots. • Data collection, monitoring, and evaluation. • Institutional strengthening and capacity building.

			• Policy advice, advocacy, and international coordination.
Potential national public and private financial backers	Ministry of Environment, Ministry of Economy, Bissau municipality, national banks, local private companies (Ecobank Guinea Bissau, Coris Bank) and potential corporate sponsors.	Poor waste management increases public health risks, environmental degradation, and urban flooding, affecting citizens and local economies. Operational and reputational risks for local businesses and service providers. Additional costs for public services and infrastructure repair due to unmanaged waste.	• Public funding allocation and budgetary support, Regulatory authority. • Public-private partnerships for infrastructure and service delivery. • Economic incentives and Corporate Social Responsibility initiatives.
Potential European and international financial backers	International financial institutions and development banks (World Bank, European Investment Bank, African Development Bank), global climate and sustainability funds(PLANTA (National Mangrove Landscapes Platform),Bio Guinea,KROHNE Guinea-Bissau,etc…..)	Poor waste management limits sustainable economic development and urban resilience, which can reduce the effectiveness of their investment and development projects. Increased risks to project outcomes and returns on investment. Weak governance and lack of local capacity make monitoring and evaluation more difficult.	☐ Large-scale financing and loans for infrastructure and capacity building ☐ Project design and implementation support ☐ Funding conditionality to encourage governance and institutional strengthening ☐ Monitoring and performance evaluation
