	Results chain	***Indicator***	***Source and mean of verification***	***Assumptions***
Impact (Overall objective)	Contributing to improve the sustainable management of solid waste in Bissau through the promotion of the circular economy and solid waste recycling by encouraging collective wellbeing initiatives.	% of total municipal waste diverted to recycling (paper, glass, plastic, organic waste). Our target is a +50% increase Percentage reduction in total unmanaged waste We aim to reach a 30% reduction in waste, ending up in open dumpsites within 5 years. Perceived improvement in overall quality of life	Annual municipal waste-management reports Data from recycling facilities (weighbridge logs, collection records) Municipal waste-monitoring system and landfill/dumpsite volume reports Annual household perception surveys (Percentage of surveyed households who feel their neighborhood is healthier, cleaner, and more livable)	*Not applicable*
Outcome (Specific objective)	Creation of a community-driven waste management network across Bissau responsible for coordinating waste collection, street cleaning, and awareness activities within their area.	Number of neighborhoods formally participating in the waste-management network. We aim to reach a +40% increase of waste collection	Reports from Bairro Captains confirming neighborhood participation Municipal waste-collection statistics by neighborhood (to track contribution to the +40% increase)	• Local authorities and community members remain motivated to actively participate in the waste-management network.

		Number of active Bairro Captains (vs. expected total). Perceived effectiveness of the waste-management network	Monthly coordination meeting attendance sheets Annual perception surveys conducted among residents	• The political and social context remains stable enough to allow continuous community engagement.
Outputs	1. Increase the attractiveness (business, tourism, …) of the city and overall health of citizens thanks to cleaner streets and unpolluted nature places	+10% increase in incoming travellers into the country 15% decrease in hospitalization due to pollution-induced illnesses. Number of schools involved in "Clean & Green" campaigns. Tourists' perception of the city's cleanliness and attractiveness	National tourism statistics (Ministry of Tourism) Hospital and clinic health records (respiratory issues, infections, pollution-related diseases) Environmental health monitoring reports Reports submitted by school administrators Conduct a qualitative survey of the respondent's perception of the city's attractiveness. Target : 7/10 overall-grade.	**Output 1** Citizens and businesses are motivated to collaborate in keeping public spaces clean. Municipal waste-collection services operate regularly and efficiently. No major environmental or health crises hinder the improvement of public spaces.

	2. Create new recycling sites and maintain the existing ones	Number of new recycling points created. Target : +50% increase in handling capacity	Survey measuring handling capacity of waste pick-up and recycling Site inspection reports	**Output 2** Sufficient financial and technical resources are available for construction and maintenance.
		Number of existing infrastructures rehabilitated.	Maintenance and rehabilitation reports from technical teams	Local authorities provide the required permits and land access.
		Number of residents using the recycling points (monthly average).	User-count logs at recycling points. Monitoring reports from recycling-site staff	Communities make regular use of the recycling facilities.
		User satisfaction with accessibility and convenience of recycling points.	Resident satisfaction surveys	
	3. Coordination between local authorities and the community to be better organized	80% of Bairro Captains presence who actively participate in the monthly meetings	Attendance rate at every monthly meeting (attendance sheet)	**Output 3** Authorities remain willing to cooperate and share information transparently.
		Number of monthly coordination meetings held (target: 12 per year).	Official meeting calendar and attendance register Reports from the municipal waste-management department	Community representatives are available and committed to participating in coordination meetings.

		Residents' perception of being included in local decision-making processes.	Annual household perception surveys	
	4. More environmentally educated population in terms of waste management and recycling, promoting circular economy	Monthly workshops with total capacity of 1.000 attendees. We aim to have 60% attendance. Total number of participants in workshops	Attendance rate of workshops with obligatory verification at entrance	**Output 4** Residents show sustained interest in awareness and training activities. Educational materials and communication channels remain accessible.
		Participants' motivation to adopt new waste-management practices after workshops.	Pre- and post-workshop surveys measuring willingness to implement learned practices	Schools, NGOs, and community groups collaborate in spreading information.
		Perceived quality and accessibility of educational materials (flyers, videos, school content).	Feedback collected during workshops or training sessions	
	5. Formalisation of informal waste pickers.	Number of informal waste pickers registered in the system. Our target is a 90% decrease of informal waste pickers.	Official registration database maintained by the municipal waste management department	**Output 5** Informal waste pickers are willing to participate in the formalisation process.

		Perceived improvement of waste pickers in working conditions (safety, respect, stability). Community perception of the role and value of formalised waste pickers.	Feedback forms collected after training and formalization process Household surveys assessing attitudes towards formalized waste pickers	Authorities support legal recognition and provide administrative facilitation. Recycling companies and cooperatives are open to integrating formalised workers.

Activity Matrix

1. Increase the attractiveness (business, tourism, …) of the city and overall health of citizens thanks to cleaner streets and unpolluted nature places 1.1 Street cleaning <u>1.1.1 Organize weekly neighborhood cleaning</u> ● Map and schedule blocks for cleaning each week ● Recruit volunteers and assign Bairro Captains to coordinate local teams ● Provide necessary cleaning materials (gloves, brooms, bags) ● Collect and properly dispose of waste after each session ● Monitor participation and cleanliness improvements via	***Means*** *What are the political, technical, financial, human and material resources required to implement these activities, e. g. staff, equipment, supplies, operational facilities, etc.* ***Costs*** *What are the action costs? How are they classified? (Breakdown in the Budget for the Action)*	***Assumptions*** *Factors outside project management's control that may impact on the activities-outputs linkage.*

weekly reports <u>1.1.2 Establish and coordinate street cleaning committee</u> ● Define committee roles (planning, logistics, volunteer coordination, monitoring) ● Hold monthly planning meetings to update schedules and responsibilities ● Maintain communication with local authorities for support and permits <u>1.1.3 Conduct monthly city-wide clean-up campaigns</u> ● Engage schools, businesses, and NGOs to participate ● Assign cleaning zones and publicize campaigns (social media, posters, local media) ● Provide supervision, tools, and safety instructions ● Track outcomes: number of participants and volume of waste collected		

<u>1.1.4 Procure and manage cleaning materials</u> ● Determine required materials and suppliers ● Distribute materials to neighborhood teams and campaigns ● Maintain inventory and monitor usage 1.2 Install waste bins and signage in public & tourist areas ● Conduct a needs assessment to identify locations ● Design signage and select durable bins ● Obtain permits from local authorities ● Procure and install bins and signs ● Schedule regular emptying and maintenance ● Monitor usage and adjust placement if needed 1.3 Organize "Clean & Green" competitions between neighborhoods ● Define competition rules and evaluation criteria (cleanliness, participation) ● Promote competition among neighborhoods via community meetings and media		

• Assign judges (Bairro Captains + municipal staff) • Track performance and award prizes monthly or quarterly • Collect feedback from participants to improve future events 1.4 Partner with local tourism agencies to promote clean city image • Identify key tourism agencies and stakeholders • Develop joint campaigns highlighting clean streets and green spaces • Create promotional materials (social media, brochures, videos) • Organize guided tours in cleaned and green neighborhoods • Monitor tourism engagement and feedback --- **2. Create new recycling sites and maintain the existing ones** 2.1 Assess and upgrade existing infrastructure • Conduct a condition assessment of all existing recycling points and waste management facilities • Identify and replace or repair damaged equipment and structures		

● Monitor improvements to ensure functionality and safety <u>2.2 Establish new recycling infrastructure</u> ● Select 4–5 pilot neighborhoods for new recycling sites ● Construct new facilities (waste management plants, recycling points, pick-up stations) ● Install sorting bins in public and residential areas ● Provide necessary technical equipment <u>2.3 Train and support staff</u> ● Train workers on operation, safety, and maintenance of recycling infrastructure ● Provide ongoing technical support and supervision <u>2.4 Implement monitoring and maintenance system</u> ● Develop a monthly inspection and repair schedule ● Allocate a maintenance fund for timely repairs ● Track performance and capacity of each site <u>2.5 Develop partnerships for sustainability</u>		

● Engage private recycling companies for technical support ● Establish agreements to ensure long-term sustainability and efficiency ● Coordinate with municipalities and community groups for ongoing management --- **3. Coordination between local authorities and the community to be better organized** <u>3.1 Establish neighborhood representatives</u> ● Select a representative (Bairro Captain) for each neighborhood to act as liaison with city programs ● Transmit the concerns of the community to the local authorities. Must show concern about the specific issues the neighbourhood is facing. ● Ensure representatives collect and communicate community concerns to local authorities ● Provide training and guidance to representatives on responsibilities and reporting		

<u>3.2 Organize regular meetings and engagement activities</u> ● Hold monthly coordination meetings between Bairro Captains, local government, and the waste management department ● Coordinate neighborhood/block meetings and safety initiatives to gather citizen input ● Track participation and follow-up on issues raised <u>3.3 Develop communication and problem-solving platforms</u> ● Create and manage a shared digital platform (WhatsApp group, mobile app, or dashboard) for reporting issues and sharing updates ● Establish local working groups to address key issues (waste management, safety, health) ● Monitor the effectiveness of communication channels and problem-solving groups --- **4. More environmentally educated population in terms of waste management and recycling, promoting circular economy**		

<u>4.1 Design and implement education and communication programs</u> ● Train Bairro Captains on waste sorting, composting, and leadership to act as local educators ● Engage media outlets and social media influencers to amplify awareness campaigns ● Integrate environmental education into school curricula and extracurricular activities ● Develop and distribute educational materials (flyers, posters, videos, social media content) <u>4.2 Organize workshops and training sessions</u> ● Conduct free workshops for citizens, providing incentives for participation ● Offer specialized training for local companies to develop profitable circular economy business models ● Track attendance and assess knowledge uptake among participants <u>4.3 Host annual awareness events</u>		

● Organize a “Green Week” festival celebrating recycling, circular economy, and sustainable practices ● Involve schools, community groups, and local businesses in festival activities ● Collect feedback and participation data to improve future events <u>4.4 Collaborate with universities and NGOs</u> ● Partner with academic institutions and NGOs for research, student engagement, and volunteer support ● Develop joint initiatives, case studies, or projects to reinforce environmental education ● Monitor outcomes and document lessons learned for program improvement --- **5. Formalisation of informal waste pickers.** <u>5.1 Implement community reporting and engagement system</u> ● Develop a reporting system that employs informal waste pickers for community monitoring ● Train workers to record and report waste-related issues in their neighborhoods		

● Monitor system usage and performance <u>5.2 Register and formalize waste pickers</u> ● Enroll informal waste pickers into official local waste management systems (ID cards, uniforms, registration) ● Conduct basic training on roles, responsibilities, and compliance ● Maintain a database to track formalized workers <u>5.3 Provide safety equipment and technical training</u> ● Supply gloves, masks, protective clothing, and other necessary safety gear ● Conduct training sessions on safe waste handling, hygiene, and operational procedures ● Monitor adherence to safety protocols <u>5.4 Support cooperatives and economic integration</u> ● Facilitate the creation of waste pickers' cooperatives for fair wages and improved coordination ● Negotiate with local authorities and private companies to include formalized pickers in public tenders and service contracts		

● Provide ongoing support to cooperatives for organizational and operational efficiency <u>5.5 Build financial and business management capacity</u> ● Provide financial literacy training for budgeting, savings, and investment ● Offer workshops on basic business management and cooperative administration ● Track uptake and application of financial and managerial skills
